Section 1

Introduction

This Closure Report summarizes the sampling activities performed at the Temporary Accumulation Area (TAA) 314 Site at the Marine Corps Air Station (MCAS) El Toro (hereinafter referred to as the "Station"), California. The work was performed by OHM Remediation Services Corp. (OHM) for the Southwest Division Naval Facilities Engineering Command (SWDIV) under Remedial Action Contract No. N68711-93-D-1459, Delivery Order (DO) 0070.

Sampling activities were conducted in accordance with the Navy, Station, and Department of Toxic Substance Control (DTSC)-approved *Draft Supplemental Work Plan, Closure of Various Temporary Accumulation Areas and RCRA Facility Assessment Sites at the Marine Corps Air Station El Toro, California* (OHM, 1997).

1.1 Site Location

The Station is located approximately 45 miles southeast of the city of Los Angeles in Orange County, California, 1 mile north of the intersection of Interstate 5 (Santa Ana) and Interstate 405 (San Diego) freeways. The Station covers approximately 4,738 acres. Approximately 800 acres of the Station property are currently designated for agricultural outlease. Agricultural outleased lands are located at the corners of the Station, and are used for plant nursery and crop production (MCAS El Toro, 1997). The location of the Station is shown in Figure 1-1, Facility Location Map.

The TAA 314 site is located in the southwestern quadrant of the Station, west of the Agua Chinon Wash in the vicinity of Building 314 (vacant), Supply Storage (Figure 1-2, Location Map). The site consists of a fuel locker area located next to Oil Water Separator (OWS) 314C near Building 314. OHM removed the inactive OWS 314C in May 1997 and OWS 314C site was closed by the Orange County Health Care Agency (OCHCA) in October 1997.

The depth to groundwater in the vicinity of the TAA 314 site was based on available water level data collected from the nearest groundwater monitoring well 18_PS8. The location of this well is shown in Figure 1-2. Based on this data, the depth to the groundwater at TAA 314 site is approximately 103 feet below ground surface (bgs) (Camp, Dresser, & McKee, Inc. Federal Programs Corporation, 1997).

1.2 Project Objectives

The objectives of this project were the following:

- Verify that all stored hazardous wastes, residues, and constituents that may pose a potential health risk have been removed from the TAA 314 site in accordance with the MCAS El Toro Detailed Plan (OHM, 1995).

- Perform verification soil sampling and analysis to obtain "closure status" of the TAA 314 site.

Based on a classification in the Draft Supplemental Work Plan, the TAA 314 site was considered a Type 3 facility (i.e., an unbermed TAA with or without fence). Project operations at Type 3 facilities were defined as soil sampling of the unbermed area and no decontamination activities unless a paved area with spillage and stains is observed (OHM, 1997).

1.3 Regulatory Background and Cleanup Goals

The closure of the TAA 314 site is completed in accordance with the appropriate federal and state requirements. The TAA 314 site is characterized as "*hazardous waste accumulation areas*" according to the Code of Federal Regulations (CFR), Title 40, Part 262.34, and the California Code of Regulations (CCR), Title 22, Section 66262.34. Because hazardous wastes have been stored at the site, closure of the TAA 314 site is also subject to federal and state regulations for closure of less than 90 days hazardous waste management facilities (CFR 40, part 264, Subpart G; and CCR 22, Section 66264, Article 7, respectively). The cleanup goals established for the TAA 314 site are based on the following:

Soil

- United States Environmental Protection Agency (EPA) Region IX Preliminary Remediation Goals (PRGs) dated May 1998 for residential land use for organic contaminants
- Background concentrations for metals contaminants (Bechtel National Inc. [BNI], 1996)
- 5,000-milligrams per kilogram (mg/kg) concentration limit for total petroleum hydrocarbons (TPH)-purgeable
- 10,000-mg/kg concentration limit for TPH-extractable

1.4 Project Scope of Work

The Scope of Work at the TAA 314 site consists of the following tasks:

- collection and laboratory analysis of confirmation samples, including soil samples obtained from beneath and adjacent to the TAA structure
- turning over salvageable and recyclable materials to the Station's Defense Reutilization and Marketing Office for recycling
- disposal of solid wastes generated during field sampling activities
- preparation of a Closure Report to describe and document the work performed

Section 2

Previous Investigations and Site Background

The following section summarizes results from previous investigations at the TAA 314 site and background history of the TAA 314 area. Background information regarding TAA 314 site was obtained from the following documents:

1. *Final RCRA Facility Assessment Report, Marine Corps Air Station El Toro, California (Jacobs Engineering Group Inc., [JEG] 1993)*
2. *Final Addendum RCRA Facility Assessment Report, Marine Corps Air Station El Toro, California (BNI, 1996a)*
3. *Bechtel National, Incorporated. 1997. Draft Final Phase II Remedial Investigation Report, Operable Unit 2A-Site 24, Marine Corps Air Station, El Toro, California. (Navy Contract N68711-92-D-4670, CTO 73, BNI 1997)*
4. *Final Base Realignment and Closure Cleanup Plan, March 1997, Marine Corps Air Station El Toro, California (MCAS El Toro, 1997)*

2.1 RCRA Facility Assessment

In 1991, JEG, as part of the Resource Conservation and Recovery Act (RCRA) Facility Assessment (RFA), performed the initial Preliminary Review and a Visual Site Inspection (VSI) of the 307 Solid Waste Management Units (SWMUs) within the Station. JEG also conducted a site visit to observe the current conditions of the SWMUs and/or TAA sites, and performed limited sampling. JEG identified a fuel storage locker area near south side of Building 314 as SWMU 269. JEG as part of the RFA sampling visit advanced one soil boring up to 25 feet below ground surface (bgs) in the vicinity of SWMU 269. A total of five soil samples were collected from soil boring 269B1. No Volatile Organic Compounds (VOCs) were detected above the laboratory reporting limit from all five samples. JEG recommended "No Further Action" for SWMU 269. The analytical data and sample location map from the JEG RFA report are included in Appendix A, JEG RFA Background Information.

After review of the JEG RFA report, DTSC requested additional information about the TAAs to determine the closure requirements. BNI performed the visual assessment of 73 TAA sites to provide more specific information for a closure strategy for the TAAs. BNI identified SWMU 269, a field locker storage area near Building 314 as TAA 314. During the BNI VSI in November 1995, no fuel locker or any drums were found at the TAA 314 Site. Therefore, no soil sampling was performed by BNI. A copy of the TAA 314 site VSI evaluation form from the BNI Final RFA Addendum report is included in Appendix B, BNI VSI Evaluation Report for TAA 314.

2.2 Remedial Investigation

TAA 314 is located above the VOC plume in the shallow aquifer within the site boundary of Installation Restoration Program (IRP) Site 24, the VOC Source Area. However, the presence of trichloroethylene (TCE) and other chlorinated solvents is believed to be associated with the sources identified in the IRP Site 24. Figure 1-3, Vicinity Map shows the location of the TAA 314 relative to IRP Site 24.

As part of the Remedial Investigation (RI), a significant amount of data collection and interpretation has already been completed for IRP Site 24. Historical aerial photographs were reviewed; and air, soil, soil-gas, and groundwater samples were collected and analyzed during the RI field activities. Also, a fate and transport conceptual model was developed and human health risk assessment was conducted for Site 24.

Field investigations were conducted under Phase I and Phase II of the RI to ascertain the nature and extent of groundwater contamination at the Station (BNI, 1997). JEG and BNI, respectively, completed the Phase I and Phase II Remedial Investigations (RI) for IRP Site 24 under Comprehensive Environmental Response Compensation and Liability Act (CERCLA) program. The highest VOC concentrations, particularly TCE, was identified in groundwater beneath IRP Site 24.

The groundwater quality in the local monitoring wells was also examined as part of the RI. Well 08_DGMW74 is considered to be downgradient approximately 200 feet southeast of TAA 314 site. Well 18_PS8 is cross gradient approximately 350 feet northeast of TAA 314 site. Wells 18_PS8 and 08DGMW74 have been impacted by TCE (CDM 1997). Groundwater conditions in the vicinity of the TAA 314 will be addressed in the Record Of Decision for IRP Site 24.

Section 3

Field Activities

The following subsections describe the activities that were performed at the TAA 314 site. Field activities were conducted in accordance with the approved *Draft Supplemental Work Plan* (OHM, 1997).

Field activities conducted at the TAA 314 site included a site inspection, preconstruction meeting, a geophysical survey, confirmation soil sampling, and waste management. Photographs of the field activities at TAA 314 Site are presented in Appendix C, Site Photographs.

3.1 Preparatory Work

OHM performed a site visit at the TAA 314 site in January 1996 and September 1997 before performing any field activities. A copy of the Site Assessment Log is included in Appendix D, Site Assessment Log.

OHM subcontractor, Geovision, conducted a geophysical survey on January 16, 1996, to identify and locate buried utilities, pipes, and other subsurface anomalies in the vicinity of the TAA 314 site. OHM also notified Underground Service Alert of the intent to hand-auger four locations up to 2 feet bgs. A copy of geophysical survey report is included in Appendix E, Geophysical Survey Data.

OHM, in coordination with the Station's Resident Officer in Charge of Construction (ROICC), conducted a preconstruction meeting. The meeting addressed the Station's regulations for contractors, the construction schedule, health and safety coordination, construction quality control (QC), and tenant notifications.

3.2 Confirmation Soil Sampling

Confirmation soil samples were collected from four locations at the TAA 314 site to verify if any spillage occurred during handling of hazardous material drums. Soil sample locations were selected, based on a visual inspection performed during the site visit on September 15, 1997. A total of 9 soil samples were collected from four hand-auger boring locations (SB-A, SB-B, SB-C, and SB-D) at the TAA 314 site.

Soil samples were collected in standard stainless steel sleeves at two different depths: 18 inches and 36 inches bgs. Details on the sampling strategy and analytical methods are discussed in Section 4. The locations of the hand-auger borings are shown on Figure 3-1, Site Plan.

3.3 Equipment Decontamination

Equipment used in the exclusion zone was decontaminated before removal from the site, as identified in the site-specific Health and Safety Plan (HSP). Decontamination procedures varied according to the type of equipment involved. The equipment used for collecting soil samples was decontaminated between each use. The hand-auger assembly was washed in a typical three-step procedure consisting of: decontaminating the equipment first using a brush in a bucket of Alconox detergent and water; then a second bucket of water for an immediate rinse; and again in a third bucket of water for the final rinse. The hand-auger assembly was decontaminated between each sample collection.

3.4 Field Quality Control Activities

QC of field operations were ensured by adherence to the Contractor Quality Control (CQC) Plan Addendum (OHM, 1997) and OHM Corporate Quality Assurance (QA) policies. A Field CQC Engineer was present during the soil sampling activities. QC activities included field inspections, field QC sampling, and project documentation.

During sampling activities, the OHM CQC engineer performed field inspections to verify the appropriate soil samples were collected to support the sampling work. CQC Reports, which included preparatory, initial, and follow-up inspections, were completed daily. A sample log was prepared and updated on a daily basis to ensure that all sampling efforts were performed as specified in the plans.

3.5 Land Surveying

After completing the confirmation soil sampling, the soil boring locations were surveyed by Cal Vada Surveying Inc., a California-registered land surveyor. The surveyed locations were measured to ± 0.01 foot horizontally and tied to the California State Plane Coordinate Systems, North American Datum 1983. The surveyed elevations were measured to ± 0.01 foot vertically and tied to mean sea level elevation. The land surveying data for TAA 314 site is presented as Appendix F, Land Survey Data.

3.6 Waste Management

Waste generated during the sampling activities at the TAA 314 site included the following:

- one bag (55-gallon drum liners) of personal protective equipment (PPE)
- approximately 10 gallons of decontamination wash water stored on-site at the CTF in a closed-top polyethylene storage tank, specifically marked "TAA Water."

All generated wastes have been disposed of in accordance with applicable State and Federal regulations. Based on the results and review of analytical data, OHM disposed of the wastes as follows:

- The bag of PPE was disposed off-site at Bowerman Canyon nonhazardous Class III landfill, based on the results of the soil samples.

Wastewater generated from decontamination activities was treated through the Station's CERCLA Carbon Adsorption Treatment System (operated and maintained by OHM) located at the central treatment facility (CTF), following the determination that the constituents were within the normal range for treatment. Treated effluent water was sampled, and based on the review of the analytical results, was transferred to the Station's golf course holding tank for reuse. A copy of the analytical result of the treated water is included in Appendix G, Laboratory Analytical Results for TAA Effluent Treated Water.

Section 4

Sampling Analytical Results and Data

Quality Assessment

The objective of the sampling and analysis program was to provide analytical data to characterize the conditions of soil beneath the TAA 314 site and to verify that the use of the TAA did not impact the soil under or around the TAA 314 site. The sampling methodology, analytical methods, analytical results, and interpretation of confirmation soil sampling have been in accordance with the analytical strategy presented in the Draft Supplemental Work Plan (OHM, 1997) and are described in the following text.

The laboratory analyses were performed based on EPA Solid Waste-846 (Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods, June 1997) and California Leaking Underground Fuel Tank (CA LUFT) Manual (State Water Resources Control Board, 1989). The test methods used for analyses were selected on the basis of their ability to detect the chemicals of potential concern with suitable detection limits to prove that there is no risk to human health and the environment.

All samples were analyzed by VOC Analytical Laboratory, a California-certified and Naval Facilities Engineering Services Center-approved analytical laboratory.

4.1 Field Sampling Summary

The sampling strategy for TAA 314 focused on two aspects of the site: possible releases on the surface soil of the TAA or possible releases into the soil surrounding the TAA. Soil samples were collected and analyzed for constituents contained in the wastes that may have been stored at the TAA 314 area.

Sample locations were selected based on a visual inspection performed during the site visit on September 15, 1997. Sample collection points included any areas where there was evidence of spills or contamination of concrete. However, no visual indication of spills was observed at TAA 314.

A total of 9 soil samples (including one duplicate) were collected from four hand-auger borings (SB-A, SB-B, SB-C, and SB-D) at the TAA 314 site. Soil samples were collected in standard stainless steel sleeves at two depths: 18 inches and 36 inches bgs. The locations of the hand-auger borings are shown on Figure 3-1, Site Plan.

An concrete-coring machine was used to open a 6-inch-diameter hole in the concrete, and then a hand-auger was used to bore into the soil under the concrete to approximately 18 inches. An undisturbed soil sample was collected at approximately 18 inches and then 36 inches bgs using a hammer-driven brass tube.

Following the collection of the soil samples, the borehole was filled with excess soil and concrete (ready mix) was poured into the open borehole (no volatile organic compounds [VOCs] were identified by the photoionization detector) in the bottom of the sump to seal the opening. The surface of the concrete was then finished with a trowel to match the existing surface. The sample collection summary log is presented in Table 4-1, Sample Collection Summary Log – TAA 314.

QA/QC samples were collected as follows:

- Equipment rinsate samples were collected at a frequency of one per day.
- Trip blank samples were collected at a frequency of one per sample cooler for coolers containing samples for VOC analyses.
- Laboratory duplicate sample analysis was performed at a frequency of one per 10 samples or per batch.
- Laboratory matrix spike/matrix spike duplicate sample (MS/MSD) analysis was performed at a frequency of one per 20 samples or per batch.
- Laboratory reagent blank analysis was performed at a frequency of one per 20 samples or per batch.

4.2 Analytical Methods

Analytical methods were selected to encompass all the chemicals of potential concern at the TAA 314 site. The following methods were performed to characterize samples collected from the TAA 314 site:

- percent moisture by American Society for Testing Materials Method D2216
- total cyanide by EPA Method 9010A
- pH by EPA Method 9045
- metals by EPA Methods 6010A and 7000 Series
- SVOCs by EPA Method 8270A and 8270B
- organochlorine pesticides and polychlorinated biphenyls by EPA Method 8081
- extractable TPH by EPA Method 8015 (CA LUFT modified)
- purgeable TPH by EPA Method 8015 (CA LUFT modified)
- VOCs by EPA Method 8260A

Also, for analysis at the TAA 314 site, the Selected Ion Monitoring (SIM) technique was used on the following four semivolatile organic compounds (SVOCs) to achieve detection limits lower than the Region IX PRGs (U.S. EPA, 1998):

- benzo(a)pyrene
- dibenzo(a,h)anthracene
- n-nitrosodi-n-propylamine
- bis(2-chloroethyl)ether

SIM is a recognized gas chromatograph/mass spectrometer technique used to lower detection limits for organic compounds. As specified in EPA Method 8270B, SVOCs are introduced into the gas chromatograph by direct injection. The components of the sample are separated by the gas chromatograph and detected by the mass spectrometer, which provides both qualitative and quantitative information.

For each component or compound separated by the gas chromatograph, the mass spectrometer produces a characteristic mass spectrum. The mass spectrometer ionizes the sample molecules and separates any resulting fragments by mass-to-charge (m/z) ratios. The fragmentation pattern is used to determine the structure of the original molecule. The intensity of one or more of the fragments is used to quantitate the identified compound.

Upon identification of a target compound by comparison of the acquired mass spectrum with the mass spectrum of a standard, EPA Method 8270B specifies a fragment or characteristic ion to use for quantitation of the analyte. Method 8270B requires that the mass spectrometer scan from 35 to 500 amu (m/z) every 1 second or less. In SIM, the entire mass range is not scanned. Typically, only a few m/z ratios are monitored. As a result, the mass spectrometer is able to collect more data from a specific m/z ratios, resulting in an improved signal-to-noise ratio, which in turn improves detection limits. There is, however, a practical limitation to the number of m/z ratios that can be monitored at one time so that the total scan time does not exceed 1 second. As a result, the number of compounds that can be measured in a single SIM analysis is limited.

4.3 Laboratory Analytical Results

This section summarizes and assesses the analytical results of sampling performed at the TAA 314 site. Confirmation soil samples analytical results, along with a comparison to MCAS El Toro background concentrations and PRG values are presented in Table 4-2, Confirmation Soil Sample Analytical Results - TAA 314 Site. The hard copies of analytical results obtained from VOC Analytical Services is included in Appendix H, Laboratory Analytical Results.

4.3.1 Confirmation Soil Sample Analytical Results

Volatile Organic Compounds — No VOCs were detected above the laboratory reporting limits in all 9-confirmation soil samples collected at TAA 314 site.

Semivolatile Organic Compounds — No SVOCs were detected above the laboratory reporting limits in all 9-confirmation soil samples collected from TAA 314 site. However, for the laboratory reporting limits to meet the PRGs, the following four SVOCs were measured with SIM analysis:

- benzo(a)pyrene
- dibenzo(a,h)anthracene
- n-nitrosodi-n-propylamine
- bis(2-chloroethyl)ether

The OHM criterion for acceptance of this SIM data was that the laboratory detection limit must be equal or less than half the PRG. In summary, no SVOCs were detected from all confirmation soil samples above the EPA Region IX PRGs and the laboratory reporting limits.

Total Petroleum Hydrocarbons — TPH as diesel, TPH as gasoline, and Jet Propellant Type 5 were not detected above the laboratory reporting limits in all the 9-confirmation soil samples.

Target Analyte List Metals — Thallium (at 3.8J mg/kg) was the only metal compound detected above the established MCAS El Toro background levels (0.53 mg/kg).

Pesticides — Five pesticide compounds were detected above the laboratory reporting limits but were below the residential PRGs. These compounds (4,4-dichlorodiphenylethene [DDE], Aldrin, Heptachlor, alpha-chlordane, and gamma-chlordane) were included in the risk calculations. Heptachlor, alpha-chlordane, and gamma-chlordane were below the Station's established background levels.

Also, laboratory detection limits for the pesticide endosulfan I at the TAA 314 site exceeded the established MCAS El Toro background levels (BNI, 1996). However, the background concentration calculated and reported by BNI is based upon only two positive results and 45 non-detected results. Also, the positive results in the BNI report appear to be estimated results (J-flags missing). The detection limits reported (for the non-detect samples) are in the 1 to 2 microgram per kilogram ($\mu\text{g}/\text{kg}$) ranges; however, the background concentration was calculated and reported to be $0.179 \mu\text{g}/\text{kg}$. The endosulfan I detection limits reported in this document for TAA 314 are below the PRGs. The laboratory reporting limit for endosulfan sulfate ($8.2 \text{ U } \mu\text{g}/\text{kg}$) in one sample identified as 18609-632 (TAA314-SB-C at 3 feet bgs) exceeded the background concentration ($4.21 \mu\text{g}/\text{kg}$) but not the PRG.

Analyte Name	Highest Concentration Detected above Laboratory Reporting Limit (mg/kg)	MCAS El Toro Established Background Concentration (mg/kg)	PRG Values Residential / Industrial (mg/kg)
4,4'-DDE	0.0079	0.233	1.7E+00 / 1.3E+00
Aldrin	0.012	0.272	1.7E+00 / 1.3E+01
Heptachlor	0.032	NE	9.9E-02 / 6.7E-01
Alpha-Chlordane	0.093	0.018	1.6E+00 / 1.2E+01
Gamma-Chlordane	0.091	0.018	1.6E+00 / 1.2E+01

Explanation:

mg/kg – milligrams per kilogram

NE - No Entry or Not Established

4.4 Data Quality Assessment

The analytical data generated for the analysis of the samples collected in connection with the assessment of TAA 314 were reviewed and validated with respect to the QA/QC parameters specified in the work plan. The following were evaluated:

- EPA-recommended holding times
- cooler condition upon receipt by the laboratory
- initial and continuing calibration standards
- method blanks

- laboratory control samples (LCS) recoveries

4.4.1 Soil Samples

All samples were prepared and analyzed within EPA-recommended holding times. The sample cooler was received intact and within the required temperature range of 4±2 degrees Celsius. Any sample results associated with QC parameters that were out of compliance with the work plan were flagged and annotated in Table 4-2. All data are useable as qualified.

4.5 Data Validation

This section addresses the validity and quality of the data collected from the TAA 314 site. Analytical data were reviewed and validated in accordance with the EPA *National Functional Guidelines for Organic and Inorganic Data Review* (EPA, 1994). Laboratory Data Consultants (LDC), an independent data validation company, performed Level III validation on these data. A hard copy of the LDC report is provided in Appendix I.

Laboratory analytical data were subjected to a four-stage process of evaluation: completeness checks, verification of hard copy and electronic results, validation of the data, and final evaluation based on the professional judgment of the project chemist.

The data were qualified by LDC to indicate whether the data have been affected by any deviation from the analytical protocols established in the Draft Supplemental Work Plan (OHM, 1997). Unusable data was qualified with an "R" (rejected). All other results were either unqualified (no flag), nondetected ("U" flag), nondetected with uncertainty in the report detection limits ("UJ" flag), or detected with uncertainty in the reported concentration ("J" flag).

4.5.1 Analytical Quality Control Program

This section provides a description of the field and laboratory QC sample results, which were used to evaluate the precision, accuracy, representativeness, completeness, and comparability.

Precision — Precision was evaluated based on the QC results submitted from the field and from the laboratory. The calculated relative percent difference (RPD) of MS/MSDs, laboratory control sample duplicates (LCSDs), and the field duplicate pair provided information on the precision of sampling and analytical procedures. RPDs for duplicate samples were not calculable when one or both results were not detected. The precision results for all the samples were within the required limits. RPD of 30 or less was calculated in the field duplicate samples 18609-704 and 18609-705.

Accuracy — Evaluation of the percent recovery of spiked analytes in MS/MSD samples, LCS/LCSDs, and surrogates provide information on accuracy. In addition, the initial and continuing calibration results provided information on analytical accuracy. The accuracy results for all samples were within the required limits with the following exceptions:

- Relative response factor (RRF) for acetone in the initial calibration was below the method criteria. Associated samples, 18609-704, 18609-705, 18609-628, 18609-629, 18609-630, 18609-631, 18609-632, and 18609-633 were estimated and flagged with 'UJ' since acetone was not detected in the sample.
- The RRF for vinyl acetate in the initial calibration was below the method criteria. However, it was not detected in the associated samples, 18609-628, 18609-629, 18609-630, 18609-631, 18609-632, 18609-633, 18609-704, 18609-705, and 18609-706; therefore, the compound was estimated and flagged with 'UJ'.

- The RRF in the continuing calibration for acetone, vinyl acetate, and 2-butanone were outside of the method acceptance limit. These compounds are flagged as 'UJ' since they were not detected in the samples 18609-628, 18609-629, 18609-630, 18609-631, 18609-633, 18609-632, 18609-704, 18609-705, and 18609-706.
- Continuing calibration RRF for chloroethane did not meet a method criteria, and was not detected in the associated samples; therefore, samples numbers, 18609-629, 18609-631, and 18609-18609-633 were flagged as 'UJ'.
- 4-Methyl-2-pentanone in the samples 18609-704, 18609-705, and 18609-706 was flagged as 'UJ' because continuing calibration RRF was outside the acceptance limit and was not detected in the samples.
- Percent difference (%D) in a continuing calibration for 2-hexanone was outside the method acceptance limits. Since it was not detected in the associated sample numbers 18609-628, 18609-629, 18609-630, 18609-631 18609-632, 18609-633, 18609-704, 18609-705, and 18609-706; they were flagged as 'UJ'.
- The %D in a continuing calibration for ethylbenzene, chloroethane, carbon disulfide and 2-hexanone did not meet the method criteria, and the compounds were not detected in the following samples, they were flagged as 'UJ': 18609-629, 18609-631, and 18609-633.
- The %D in a continuing calibration for alpha-BHC for the samples 18609-704 and 18609-705 was outside the acceptance limit, therefore, was flagged as 'J'.

Representativeness — Representativeness was assessed through the evaluation of method blank and trip blank samples. Target analytes were not detected in the method and trip blank samples with the following exception:

- Acetone in the method blank was found above the reporting limit; therefore, sample 18609-reporting limits were raised to 58 µg/kg and flagged with 'U'.
- Reporting limits for Di-n-butylphthalate in the samples 18609-628, 18609-630, and 18609-632 were raised to 310, 280, and 260 µg/kg, respectively and flagged with 'U' due to the compound was detected in the method blank.
- TPH as gasoline of 0.069 mg/L, 2- Hexanone of 1.1 µg/L, Acetone of 38 µg/L, Methyl ethyl ketone of 33 µg/L were detected in the sample 18609-708, which was a rinsate sample.

Completeness — Completeness was evaluated in two criteria. The first criterion was assuring that all analytical requests were met, samples were received in the proper condition, and all analytes were performed within the technical holding times. The second criterion was evaluating the analytical completeness by calculating the percent of acceptable analytes. The completeness parameters are:

- the completeness goal for holding times is 100 percent

- the goal for sample collection and analysis frequency of duplicate and MS/MSD samples was 10 percent and 5 percent, respectively
- the percent analytical completeness goal was 90 percent

All samples were extracted and analyzed within the appropriate holding times. No duplicate samples were collected. The precision from field duplicates will be used qualitatively to assess the heterogeneity of the soil. The percent analytical completeness goal is based on a project-wide sampling program and cannot be assessed on a site-by-site basis.

Comparability — To ensure comparability, sampling was performed using standardized procedures. Laboratory procedures follow EPA analytical methods and the CA LUFT Manual guidelines. All soil samples were reported on a dry weight basis. The data were then evaluated for comparability of reporting detection limits (RDLs) and associated dilution factors. RDLs were elevated when samples required dilution to quantify target compounds within the linear range of the instrument or when there was sample matrix interference.

All reporting limits were achieved for VOCs, TPH-purgeable, TPH-extractable, metals, SVOCs, pesticides, polychlorinated biphenyls, pH, and cyanide by the laboratory.

Summary — All data associated with the TAA 314 site were usable and acceptable as qualified. Overall precision and accuracy were met. The analytical results and associated qualifiers are summarized in Table 4-2.

Section 5

Risk Characterization and Hazard Index Calculation

This section (1) briefly describes the approach used to estimate risk, and (2) summarizes the baseline screening level risk assessment results for the TAA 314 site. A screening level risk assessment for human health was conducted for TAA 314 following the guidance provided in the EPA Region IX PRGs Memorandum (EPA, 1998). The results of confirmation soil sampling conducted at the TAA were used to calculate risks.

5.1 Physical Characteristics of the TAA 314 Site

Based on the review of the boring logs for groundwater monitoring wells 08_DGMW74 and 18_PS8, the subsurface lithology at TAA 314 site consists of predominantly silty sand with layers of clayey sand from ground surface to first encountered groundwater. The principal aquifer is present at a depth of approximately 103 feet bgs. The regional groundwater flow direction in the area of site is generally to the west-northwest (BNI, 1997).

5.2 Exposure Assessment

The TAA 314 was a fuel locker area for storage of hazardous materials under an industrial land use exposure scenario. The Station is preparing for closure in July 1999 in accordance with the Base Closure and Realignment Act of 1993 (BRAC III). The TAA 314 site is located within an area that has been tentatively identified as part of the cargo area according to the El Toro Community Reuse Plan (County of Orange, 1997) as shown in Appendix J, Tentative Reuse Parcel Location of TAA 314. The future land use for the site is expected to remain industrial as part of the cargo area for the proposed airport facility as shown in proposed airport and open space plan Year 2020 Concept C (County of Orange, 1998).

There is limited exposure to soil because there is a concrete surface over most of the site. The cover is expected to remain during the future land use as part of the cargo area. However, for screening purposes, the ingestion, dermal contact, and inhalation exposure pathways are assumed to be complete as if there were no cover. Should the screening fail, further evaluation of the exposure pathways would be required. Figure 5-1 presents the TAA 314 site conceptual model.

Under an industrial and/or residential land use scenario at TAA 314, humans (workers) could be potentially exposed to TAA 314 surrounding soil by ingestion, dermal contact, or inhalation of dust or volatilized contaminants. These are the same exposure pathways evaluated by the EPA PRGs (EPA, 1998). Figure 5-2, Potential Migration Pathways, Exposure Routes and Receptors, presents the potential migration pathways at the TAA 314 site.

5.3 Toxicity Assessment

The PRGs incorporate the toxicity values from the Integrated Risk Information System, the Health Effects Assessment Summary Tables, and the National Center for Environmental Assessment. Cancer PRGs incorporate cancer toxicity values and the noncancer PRGs incorporate the toxicity values for chronic health effects other than cancer (EPA, 1998). Both cancer risk and noncancer hazards were evaluated in this screening risk assessment.

5.4 Risk Characterization

The PRGs are concentrations calculated using standard exposure factors that are protective of humans, including sensitive groups, over a lifetime. These PRG concentrations pose acceptable cancer risk or non-cancer hazard under the exposure scenarios evaluated. Generally, a cancer risk of 10^{-6} to 10^{-4} and a non-cancer hazard index of 1 or less are considered acceptable levels of exposure. The PRG concentrations are calculated to at a cancer risk level of 1×10^{-6} and a non-cancer hazard index of 1.

Cancer risk is calculated by dividing the site concentration by the PRG for each chemical. The ratios are added and multiplied by 10^{-6} . The hazard index is calculated by dividing the site concentration by the PRG for each chemical and adding the ratios.

The carcinogens detected in the soil at the TAA 314 site include; DDE, Aldrin, Heptachlor, alpha and gamma Chlordane, Arsenic and Chromium. All but Heptachlor and the alpha and gamma Chlordane were below the Station background concentrations (Table 5-1 and Table 5-2). The only carcinogen to exceed its residential PRG value was arsenic. However, the net cancer risk after subtracting background is less than 10^{-6} or 9×10^{-8} .

The detected chemicals that could potentially contribute to non-cancer hazards include the organic carcinogens detected and the 12 metals listed in Table 5-1. The total hazard for all detected chemicals is 1.5. All the detected metals were less than background except for Thallium. Thallium did not exceed its PRG value but resulted in a hazard index of 0.73. The hazard index due to the pesticides that were detected above background was 0.12. The sum of the non-cancer hazards for chemicals detected above background was less than 1.0.

The site-related incremental cancer risk and non-cancer hazard index is acceptable for the following reasons:

- The net carcinogenic risk is less than 10^{-6} for the residential scenario.
- The non-cancer hazard index for chemicals detected over background concentrations is less than 1.0 for the residential scenario.
- The residential scenario was evaluated as worst-case. The current and future industrial scenario, the cancer risk and non-cancer hazard would be even less.

Section 6

Conclusions and Recommendations

The following conclusions are based upon existing background information, previous field investigations, OHM's site visit, and the field soil sampling analytical results:

- The TAA 314 site was an area where a fuel locker was staged. The TAA 314 fuel locker was placed on a concrete-paved area. Approximately in November 1995, the fuel locker was removed and site was no longer used to store any hazardous materials. Also, an OWS 314C in the vicinity of TAA 314 was removed by OHM and OWS 314C site was closed by OCHCA in October 1997.
- OHM observed no visible stains, evidence of spills, or staining at the TAA 314 site during the site visits conducted in January 1996 and September 1997.
- OHM collected 9 confirmation soil samples at the TAA 314 site. Based on the review of analytical data, no indications of hazardous contaminants (i.e., previous spills) were found in the soil under or around the TAA 314 site. Therefore, the use of the fuel locker did not impact the soil at the TAA 314 site.
- No TPH, VOCs, SVOCs, pesticides, and metal compounds from all the 9 confirmation soil samples were detected above the Station's established background concentration. The few chemicals that were detected in the soil above the laboratory reporting limits or the PRG values were analyzed to determine the risk associated with their presence.
- The residential risk calculations for the TAA 314 site resulted in a site-related cancer risk less background risk of 9.25×10^{-8} and a site-related residential noncancer hazard index of 1.5, both of which are generally accepted levels of exposure.
- The TAA 314 (SWMU 269) is located within the boundary of IRP Site 24 – the VOC Source Area. The groundwater beneath TAA 314 (SWMU 269) has been impacted by chlorinated solvents believed to originate from the primary sources identified within IRP Site 24. Ground water conditions beneath TAA 314 (SWMU 269) will be addressed during the development of the Proposed Plan and Record of Decision for IRP Site 24 – the VOC Source Area.

The objectives of this project are considered to be achieved, since the TAA 314 site is no longer used for storage of hazardous materials or wastes and confirmation sampling analytical results verified that concentrations of contaminants were at or below acceptable background or health-risk based concentrations.

Based on the information provided, closure goals were achieved with respect to soil for TAA 314 site; therefore, TAA 314 (also known as SWMU 269) should be identified as "closed."

Table 4 - 2 Confirmation Soil Sample Analytical Results - TAA 314

Explanation:

- B - result exceeds background
 - CA LUFT - California Leaking Underground Fuel Tank
 - EPA - United States Environmental Protection Agency
 - J - estimated
 - M - Modified
 - MDL - method detection limit
 - mg/kg - milligrams per kilogram
 - NA - not analyzed
 - NE - not established
 - OHM - OHM Remediation Services Corp.
 - PRG - Preliminary Remediation Goal, EPA Region IX, May 1998
 - RL - reporting limit
 - SB - soil boring
 - TPH - total petroleum hydrocarbons
 - U - not detected above or equal to the stated reporting limit
 - UST - underground storage tank
 - X - result exceeds industrial PRGs
 - Y - result exceeds residential PRGs
 - µg/kg - micrograms per kilogram
- * If the analyte had been detected between the MDL and RL the actual value would have been reported and flagged with a "J" qualifier. For the samples in question, the laboratory did not detect analyte concentrations between the MDL and the RL. As a result, the samples are qualified as non-detect ("U").

SWMU/Area of Concern
Number 269**

Unit Characteristics

An underground storage tank area west of Building 314 was discovered during the VSI for SWMU/AOC Number 91. This area appears to be the location of three underground storage tanks. The top surface of the storage area is approximately 2,500 sq ft in size. The location of the tanks is identified by three wood housing vaults. The housing vaults provide cover for the top of the USTs. Inside one vault, the top opening of a UST was observed. A liquid surface could be seen approximate 2 in. from the top of the tank. There was also a hose stored inside the vault with one end placed inside the tank opening. The hoses appeared to be used for filling the tank. The inside of the housing vaults and the ground surrounding the housing vaults is stained. A strong petroleum odor is present around the storage area.

Waste Characteristics

Waste petroleum (possibly oil and/or JP-5)

Possible Migration Pathways

Subsurface soil

Evidence of Release

Staining inside and surrounding the housing vaults

Exposure Potential

On-Station personnel

Recommendations

These tanks have not been tank tested. There are stains on the pavement around these tanks although soil does not appear to be impacted. Since it is difficult to assess the potential for release from these underground tanks, a sampling visit is recommended for this SWMU/AOC.

January 16, 1996

GEOVISION JOB NUMBER: 97206

1.0 Introduction

A geophysical investigation was carried out on January 15, 1996 for OHM Remediation Services Corporation adjacent to Building 314, located at Marine Corps Air Station (MCAS) El Toro, Santa Ana, California. The investigation was conducted to verify and accurately locate the presence of all detectable underground utilities prior to drilling in the surveyed area.

2.0 Field Procedures

GEOVision's standard clearance procedures were used to survey the site to accurately locate underground utilities in the surrounding area. GEOVision field teams used the attached GEOPHYSICAL CLEARANCE FORM to ensure that all appropriate procedures were followed. Procedures that were not appropriate for the site were lined out.

The crew used the Metrotech utility locator in the 82 MHz mode, which picks up any conductive piping in the area, to circle the suspected utility location. One field crew member stood on or near the suspected utility location holding the transmitter, and keeping it constantly oriented on the second crew member who swept out a circle around the suspected utility location. If a line was found, the Metrotech transmitter was then placed on the suspected line while the second crew member tracked the line with the receiver. We also swept the area with the Metrotech in 60 hz mode to locate any live electrical lines. The utility lines found were marked on the ground and located on the map.

A GSSI SIR-2 digital Ground Penetrating Radar (GPR) system was used to collect GPR profiles surrounding the site. The enclosed site map shows the locations of all profiles, which were chosen to intercept utilities entering the area to be cleared. Profiles were collected using the 500 MHz antenna. A marker switch on the antenna handle was used to place 5' spaced fiduciary marks on each profile as the antenna was pulled along the profile lines. All GPR records were stored on the system's hard drive for later processing and archiving, and were printed out onsite using a portable printer. Representative GPR profiles, hand annotated by the operator in the field, are attached.

An accurate, scaled geophysical survey map was then drawn on the back of the GEOPHYSICAL CLEARANCE FORM. All anomalies found by GPR or utility locator directly in the area to be cleared were marked at the site and shown on the enclosed site map.

3.0 Conclusions

Four utilities and one unknown line were identified in the vicinity of the area to be cleared as indicated on the survey map included in the report. An orange dashed line encloses the cleared area.

LOCATION EL TORO - MCAS
DATE 15 JAN 97 TIME 0800h
SITE DESCRIPTION: BLDG 314, CONG. PMS ON EAST END

GEOPHYSICAL EQUIPMENT

GROUND PENETRATING RADAR (GPR) UNIT: SIR2 MAGNETOMETER: -
ELECTROMAGNETIC (EM): - EM LINE TRACER (LT): 9890
METAL DETECTOR (MD): - OTHER: -

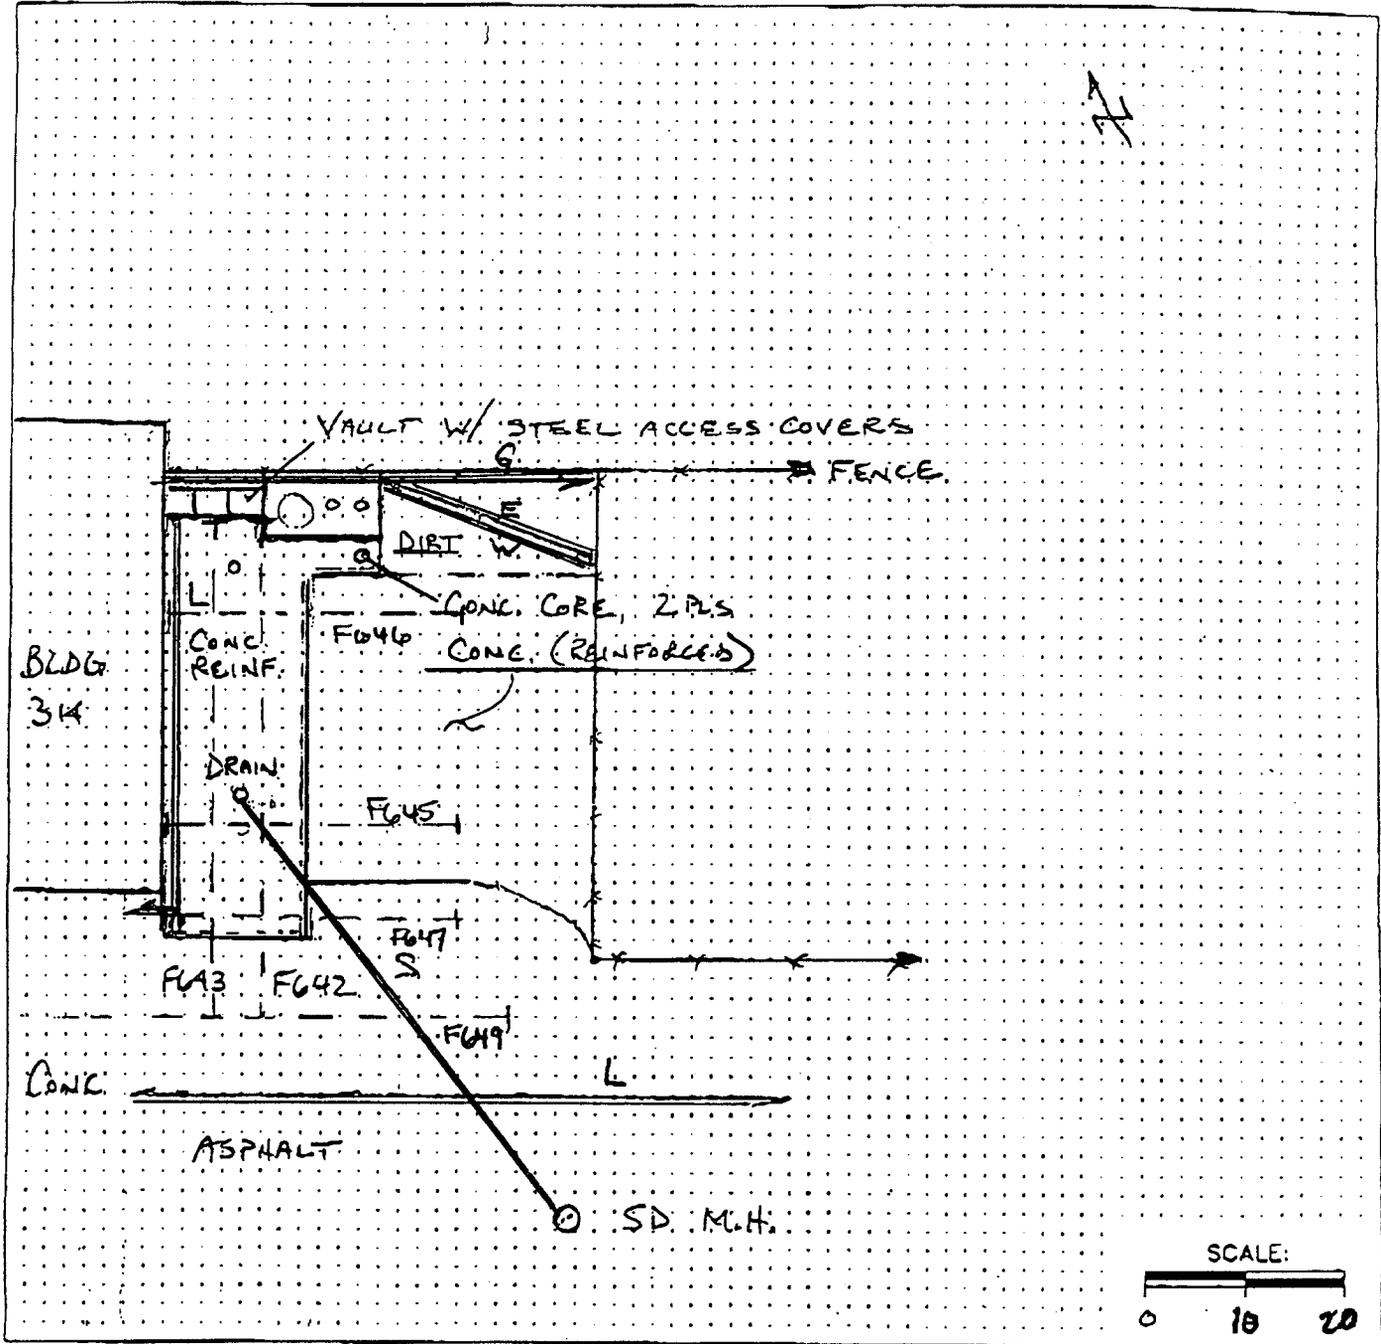

PROCEDURES

- 1. Inspect available utility maps and trace all recorded utilities in the vicinity of the proposed drilling location using LT, and if necessary GPR.
- 2. Review available geophysical data: Magnetic EM-31 EM-61
- 3. Inspect site and trace all pipes evident from field observations (ie. manhole, vault, valve, cracked asphalt, pipe at surface, etc)
- 4. Sweep proposed drilling location with LT in 50/60 Hz mode
- 5. Hold LT transmitter over proposed drilling location and circle at about a 40 foot radius with receiver tracing all utilities encountered.
- 6. Conduct two perpendicular GPR profiles through proposed ^{LOCATION} borehole.
GPR antenna: 500MHz
GPR range: 30 uses Estimated depth penetration *: 3'-4' / 1'-2'
* utility lines below this depth cannot be detected using GPR ASPH./DIAM / R.C.
- 7. Other CLEARED AREA MARKED w/ DASHED ORANGE LINE.
NAT. GAS IN POLY. TANKS NOT IDENTIFIABLE USING GEOPHYSICS.
UTILITIES BENEATH REIN. CONC. NOT TRACEABLE / IDENTIFIABLE.
SEWER LINE DRAWN FROM BARE DRAWING & SURFACE PHYSICAL REFERENCES.

Not Detected is shown as PQL, with dilution and moisture corrected if applicable.

Qualifier: U - Not Detected or less than MDL

E - Exceed calibration range

J - Less than RL (PQL, EQL or CRDL), but greater than MDL, or an estimated result (e.g. for TIC)

B - A positive value was found in the method blank

D - Diluted

Not Detected is shown as IDL moisture-corrected if applicable

Note: RL: PQL (EQL) or CRDL D-Date: Digestion Date; A-Date: Analysis Date; DF: Dilution Factor
 C Qualifier: U - Not Detected or less than IDL B - Less than RL (PQL, EQL or CRDL), but greater than IDL.
 Q Qualifier: N - Spike recovery out of control * - Duplicate analysis out of control
 W - Post digestion spike for GFAA out of control E - Serial dilution difference out of control
 M Qualifier: P - ICP A - FLAA F - GFAA CV - Cold Vapor

1	DIBUTYLCHLORENDATE (DBC) 1770-80-5	50-200	79
# of out-of-control			0

Not Detected is shown as PQL, with dilution and moisture corrected if applicable.

Qualifier: U - Not Detected or less than MDL
 J - Less than RL (PQL, EQL or CRDL), but greater than MDL, or an estimated result (e.g. for TIC)
 E - Exceed calibration range
 B - A positive value was found in the method blank
 D - Diluted

Introduction

This data review covers 12 soil samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015 modified for Total Petroleum Hydrocarbons (TPH) as Gasoline.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section IX.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

b. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 15.0% QC limits.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as gasoline contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

V. Target Compound Identification

Raw data were not reviewed for this SDG.

VI. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

VII. System Performance

Raw data were not reviewed for this SDG.

VIII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Field Blanks

Sample 18609-636 was identified as a trip blank. No total petroleum hydrocarbons as gasoline contaminants were found in this blank.

Introduction

This data review covers 12 soil samples and one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015 modified for Total Petroleum Hydrocarbons (TPH) as Extractables.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section IX.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

b. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 15.0% QC limits.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as extractable contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

V. Target Compound Identification

Raw data were not reviewed for this SDG.

VI. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

VII. System Performance

Raw data were not reviewed for this SDG.

VIII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Field Blanks

No field blanks were identified in this SDG.

Introduction

This data review covers 26 soil samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the BFB tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
9/10/97	Acetone Vinyl acetate	0.047 (≥ 0.05) 0.046 (≥ 0.05)	18609-610 18609-612 18609-614 18609-616 18609-615** B71015331 B71015851	J (all detects) R (all non-detects) J (all detects) R (all non-detects)	A

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
10/22/97	Acetone Vinyl acetate	0.032 (≥ 0.05) 0.030 (≥ 0.05)	18609-618 18609-620 18609-622 18609-624 18609-626 18609-628 18609-630 18609-632 18609-611 18609-613 18609-617 18609-619 18609-621 18609-623 18609-625 18609-627 18609-629 18609-631 18609-633 18609-621MS 18609-621MSD B7110791	J (all detects) R (all non-detects) J (all detects) R (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds with the following exceptions:

Date	Compound	%D (Limits)	Associated Samples	Flag	A or P

V. Blanks

Method blanks were reviewed for each matrix as applicable with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
18609-637A 18609-636 18609-621 18609-623 18609-625 18609-627 18609-629 18609-631 18609-633	All TCL compounds	Method blank associated with these samples was not run within the same 12 hour shift.	Method blanks must be run within the same 12 hour shift.	None	P

No volatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Analysis Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B7101136	10/20/97	Acetone	6.7 ug/L	All water samples in SDG G9710387
B7110791	10/23/97	Acetone Methyl ethyl ketone	32 ug/Kg 4.1 ug/Kg	18609-618 18609-620 18609-622 18609-624 18609-626 18609-628 18609-630 18609-632 18609-611 18609-613 18609-617 18609-619 18609-621 18609-623 18609-625 18609-627 18609-629 18609-631 18609-633
B7101585	10/21/97	Acetone Methyl ethyl ketone Methyl-tert-butyl ether	28 ug/Kg 2.5 ug/Kg 1.5 ug/Kg	18609-615**

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
18609-637A	Acetone	12 ug/L	50U ug/L
18609-636	Acetone	12 ug/L	50U ug/L
18609-628	Acetone	23 ug/Kg	58U ug/Kg
18609-613	Acetone	22 ug/Kg	53U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
All samples in SDG G9710387	All TCL compounds	The LCS was analyzed as a continuing calibration standard.	The LCS should be analyzed independently from the calibration.	None	P

Sample	Compound	Finding	Criteria	Flag	A or P
18609-621 18609-623 18609-625 18609-627 18609-629 18609-631 18609-633	All TCL compounds	LCS associated with these samples was not run within the same 12 hour shift.	LCSs must be run within the same 12 hour shift.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

XIV. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

Sample 18609-636 was identified as a trip blank. No volatile contaminants were found in this blank with the following exceptions:

Trip Blank ID	Compound	Concentration (ug/L)
18609-636	Acetone Ethylbenzene	12 0.63

Sample 18609-637A was identified as a rinsate. No volatile contaminants were found in this blank with the following exceptions:

Rinsate ID	Compound	Concentration (ug/L)
18609-637A	Acetone	12

Introduction

This data review covers 12 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270B for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the DFTPP tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all semivolatile target compounds and system monitoring compounds were greater than or equal to 0.05 as required.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 20.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B7101587*1*MB	10/21/97	Di-n-butylphthalate	220 ug/Kg	All samples in SDG G9710387

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found

in the associated method blanks with the following exceptions:

Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
18609-610	Di-n-butylphthalate	470 ug/Kg	470U ug/Kg
18609-612	Di-n-butylphthalate	282 ug/Kg	370U ug/Kg
18609-614	Di-n-butylphthalate	333 ug/Kg	370U ug/Kg
18609-616	Di-n-butylphthalate	200 ug/Kg	370U ug/Kg
18609-618	Di-n-butylphthalate	190 ug/Kg	370U ug/Kg
18609-620	Di-n-butylphthalate	230 ug/Kg	350U ug/Kg
18609-622	Di-n-butylphthalate	250 ug/Kg	350U ug/Kg
18609-624	Di-n-butylphthalate	190 ug/Kg	350U ug/Kg
18609-626	Di-n-butylphthalate	290 ug/Kg	350U ug/Kg
18609-628	Di-n-butylphthalate	310 ug/Kg	380U ug/Kg
18609-630	Di-n-butylphthalate	280 ug/Kg	380U ug/Kg
18609-632	Di-n-butylphthalate	260 ug/Kg	390U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable with the following exceptions:

Samples	Compound	Finding	Criteria	Flag	A or P
All samples in SDG G9710387	N-Nitroso-di-n-propylamine	The MS/MSD associated with these samples was not spiked with this compound.	The MS/MSD must be performed according to the QAPP.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable with the following exceptions:

Samples	Compound	Finding	Criteria	Flag	A or P
All samples in SDG G9710387	N-Nitroso-di-n-propylamine	The LCS/LCSD associated with these samples was not spiked with this compound.	The LCS/LCSD must be performed according to the QAPP.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

18609-626
18609-628
18609-630
18609-632

Introduction

This data review covers 12 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270-SIM for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the DFTPP tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all semivolatile target compounds and system monitoring compounds were greater than or equal to 0.05 as required.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were

within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

Internal standard data were not provided and therefore not reviewed.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

Introduction

This data review covers 12 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8081 for Chlorinated Pesticides and PCBs.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification flags is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XIV.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

III. Initial Calibration

Initial calibration of single and multicomponent compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

The individual 4,4'-DDT and Endrin breakdowns were less than 20.0% .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide or PCB contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Column	Surrogate	%R (Limits)	Compound	Flag	A or P
18609-626	DB-608	Tetrachloro-m-xylene	146 (35-135)	All TCL compounds	J (all detects)	A

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each

matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Florisil cleanup was not required and therefore not performed in this SDG.

b. GPC Calibration

GPC cleanup was not required and therefore not performed in this SDG.

XI. Target Compound Identification

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and Reported CRQLs

Raw data were not reviewed for this SDG.

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

XIV. Field Duplicates

No field duplicates were identified in this SDG.

XV. Field Blanks

No field blanks were identified in this SDG.

18609-630
18609-632

Introduction

This data review covers 12 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010 and 7000 for Metals and EPA SW 846 Method 9010A for Cyanide. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, and Zinc.

The review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994) as there are no current guidelines for the methods stated above.

A table summarizing all data qualification flags is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from specified protocols or is of technical advisory nature.

Blanks are summarized in Section III.

Field duplicates are summarized in Section XIII.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
All samples in SDG G9710387	Cyanide	Calibration verification not performed at the required frequencies.	Calibration verification should be performed immediately following initial calibration and once every ten samples.	None	P

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found above the reporting limit in the initial, continuing and preparation blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
18609-598MS/MSD (All samples in SDG G9710387)	Selenium	15 (73-122)	19 (73-122)	-	J (all detects) R (all non-detects)	A
18609-598MS/MSD (All samples in SDG G9710387)	Silver Barium Magnesium Arsenic Mercury	79 (80-120) 69 (80-120) 125 (80-120) 69 (74-120) -	- - - 59 (74-120) 75 (77-120)	- - - - -	J J J (all detects) J J	A

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption QC were not reviewed for this SDG.

X. ICP Serial Dilution

Although ICP serial dilution analysis was not required by the method, it was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

Raw data were not reviewed for this SDG.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

XIII. Field Duplicates

No field duplicates were identified in this SDG.

XIV. Field Blanks

No field blanks were identified in this SDG.

Introduction

This data review covers 12 soil samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015 modified for Total Petroleum Hydrocarbons (TPH) as Gasoline.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section IX.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

b. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 15.0% QC limits.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as gasoline contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

V. Target Compound Identification

All target compound identifications were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples

reviewed by Level C criteria.

VI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

VII. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

VIII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

IX. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No chlorinated pesticides or PCBs were detected in any of the samples.

X. Field Blanks

Sample 18609-707 was identified as a trip blank. No total petroleum hydrocarbons as gasoline contaminants were found in this blank.

Sample 18609-708 was identified as a rinsate. No total petroleum hydrocarbons as gasoline contaminants were found in this blank with the following exceptions:

Rinsate ID	Compound	Concentration (mg/L)
18609-708	TPH as gasoline	0.069

**Indicates sample underwent NFESC Level D review

Introduction

This data review covers 12 soil samples and one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015 modified for Total Petroleum Hydrocarbons (TPH) as Extractables.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section IX.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

b. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 15.0% QC limits.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as extractable contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

V. Target Compound Identification

All target compound identifications were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples

reviewed by Level C criteria.

VI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

VII. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

VIII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

IX. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No total petroleum hydrocarbons as extractables were detected in any of the samples.

X. Field Blanks

Sample 18609-708 was identified as a rinsate. No total petroleum hydrocarbons as extractable contaminants were found in this blank.

**Indicates sample underwent NFESC Level D review

Introduction

This data review covers 21 soil samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the BFB tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
All water samples in SDG G9710422	Vinyl acetate	A four point calibration was performed.	A five point calibration is specified by the method.	None	P

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
10/22/97	Acetone Vinyl acetate	0.032 (≥ 0.05) 0.030 (≥ 0.05)	All soil samples in SDG G9710422	J (all detects) R (all non-detects) J (all detects) R (all non-detects)	A
10/10/97	Vinyl acetate 4-Methyl-2-pentanone	0.025 (≥ 0.05) 0.043 (≥ 0.05)	All water samples in SDG G9710422	J (all detects) R (all non-detects) J (all detects) R (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration

RRF and the continuing calibration RRF were less than or equal to 25.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds with the following exceptions:

Date	Compound	%D (Limits)	Associated Samples	Flag	A or P
10/25/97	Vinyl chloride 2-Butanone 4-Methyl-2-pentanone 2-Hexanone	25.6 (≤ 25) 58.0 (≤ 50) 55.0 (≤ 50) 63.4 (≤ 50)	18609-691 18609-689 18609-695 18609-694 B71016321	J J J J	P
10/26/97	Vinyl chloride Acetone 2-Butanone 4-Methyl-2-pentanone 2-Hexanone	27.2 (≤ 25) 53.1 (≤ 50) 60.0 (≤ 50) 56.3 (≤ 50) 62.2 (≤ 50)	18609-704 18609-705 18609-697 18609-703 18609-701 18609-699 18609-706	J	P
10/22/97	Bromomethane 2-Butanone	50.2 (≤ 50) 76.8 (≤ 50)	18609-707 B71014181	J J	A
10/23/97	Bromomethane Vinyl acetate	59.1 (≤ 50) 71.3 (≤ 50)	18609-708	J	A

All of the continuing calibration RRF values were within validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
10/25/97 (B1977)	Acetone Vinyl acetate 2-Butanone 4-Methyl-2-pentanone	0.030 (≥ 0.05) 0.021 (≥ 0.05) 0.021 (≥ 0.05) 0.036 (≥ 0.05)	18609-691 18609-689 18609-695 18609-694 B71016321	J (all detects) R (all non-detects)	A
10/25/97 (B1988A)	Acetone Vinyl acetate 2-Butanone	0.020 (≥ 0.05) 0.025 (≥ 0.05) 0.029 (≥ 0.05)	B71016391	J (all detects) R (all non-detects)	A
10/26/97	Acetone Vinyl acetate 2-Butanone 4-Methyl-2-pentanone	0.015 (≥ 0.05) 0.021 (≥ 0.05) 0.020 (≥ 0.05) 0.035 (≥ 0.05)	18609-704 18609-705 18609-697 18609-703 18609-701 18609-699 18609-706	J (all detects) R (all non-detects)	A

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
10/27/97	Acetone Vinyl acetate	0.043 (≥ 0.05) 0.028 (≥ 0.05)	18609-690 18609-688 18609-692 18609-693 18609-696 18609-702 18609-700** 18609-698 18609-702MS 18609-702MSD B71017381	J (all detects) R (all non-detects)	A
10/22/97	Vinyl acetate	0.024 (≥ 0.05)	18609-707 B71014181	J (all detects) R (all non-detects)	A
10/23/97	Vinyl acetate	0.007 (≥ 0.05)	18609-708 B71015841	J (all detects) R (all non-detects)	A

V. Blanks

Method blanks were reviewed for each matrix as applicable with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
18609-704 18609-705 18609-697 18609-703 18609-701 18609-699 18609-706	All TCL compounds	Method blank associated with these samples was not run within the same 12 hour shift.	Method blanks must be run within the same 12 hour shift.	None	P

No volatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Analysis Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B71017381	10/27/97	Acetone Methyl ethyl ketone Methyl-tert-butyl ether	16 ug/Kg 1.8 ug/Kg 1.5 ug/Kg	18609-690 18609-688 18609-692 18609-693 18609-696 18609-702 18609-700** 18609-698 18609-702MS 18609-702MSD

Method Blank ID	Analysis Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B71016321	10/24/97	2-Hexanone Acetone Methyl ethyl ketone Methyl isobutyl ketone	1.4 ug/Kg 97 ug/Kg 1.9 ug/Kg 0.82 ug/Kg	18609-691 18609-689 18609-695 18609-694
B71016391	10/25/97	Acetone	6.2 ug/Kg	18609-704 18609-705 18609-697 18609-703 18609-701 18609-699 18609-706
B71014181	10/22/97	Methylene chloride Acetone Chlorobenzene	0.51 ug/L 4.5 ug/L 0.54 ug/L	18609-707
B71015841	10/23/97	Acetone Chlorobenzene Toluene	1.2 ug/L 0.21 ug/L 0.26 ug/L	18609-708

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
All samples in SDG G9710422	All TCL compounds	The LCS was analyzed as a continuing calibration standard.	The LCS should be analyzed independently from the calibration.	None	P

Sample	Compound	Finding	Criteria	Flag	A or P
18609-704 18609-705 18609-691 18609-689 18609-695 18609-694 18609-697 18609-703 18609-701 18609-699 18609-706	All TCL compounds	LCS associated with these samples was not run within the same 12 hour shift.	LCSs must be run within the same 12 hour shift.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
C71031571/81 (18609-708 B71015841)	1,1-Dichloroethene Trichloroethene	- 128 (71-125)	- -	23 (≤ 20) -	J J (all detects)	A

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

XIV. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No semivolatiles were detected in any of the samples.

XVII. Field Blanks

Sample 18609-707 was identified as a trip blank. No volatile contaminants were found in this blank.

Sample 18609-708 was identified as a rinsate. No volatile contaminants were found in this blank with the following exceptions:

Rinsate ID	Compound	Concentration (ug/L)
18609-708	2-Hexanone	11
	Acetone	38
	Methyl ethyl ketone	33

**Indicates sample underwent NFESC Level D review

Introduction

This data review covers 17 soil samples and one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270B for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the DFTPP tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all semivolatile target compounds and system monitoring compounds were greater than or equal to 0.05 as required.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 20.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B7101781*1*MB	10/21/97	Di-n-butylphthalate	150 ug/Kg	18609-690 18609-688 18609-692 18609-693 18609-696 18609-702 18609-700**

Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
B7101401*1*MB	10/23/97	Di-n-butylphthalate	110 ug/Kg	18609-698 18609-704 18609-705
B7101740*1*MB	10/23/97	Di-n-butylphthalate	4.9 ug/L	18609-708

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
18609-690	Di-n-butylphthalate	170 ug/Kg	400U ug/Kg
18609-688	Di-n-butylphthalate	160 ug/Kg	390U ug/Kg
18609-692	Di-n-butylphthalate	230 ug/Kg	380U ug/Kg
18609-693	Di-n-butylphthalate	200 ug/Kg	380U ug/Kg
18609-696	Di-n-butylphthalate	180 ug/Kg	370U ug/Kg
18609-702	Di-n-butylphthalate	230 ug/Kg	390U ug/Kg
18609-704	Di-n-butylphthalate	210 ug/Kg	380U ug/Kg
18609-705	Di-n-butylphthalate	210 ug/Kg	380U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable with the following exceptions:

Samples	Compound	Finding	Criteria	Flag	A or P
All soil samples in SDG G9710422	N-Nitroso-di-n-propylamine	The MS/MSD associated with these samples was not spiked with this compound.	The MS/MSD must be performed according to the QAPP.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable with the following exceptions:

Samples	Compound	Finding	Criteria	Flag	A or P
18609-701 B711182*1*MB	N-Nitroso-di-n-propylamine	The LCS/LCSD associated with these samples was not spiked with this compound.	The LCS/LCSD must be performed according to the QAPP.	None	P

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
C7103350*1*LC/51*1*LC (All water samples in SDG G9710422)	4-Chloroaniline	160 (46-126)	160 (46-126)	-	J (all detects)	A
	4-Nitroaniline	197 (40-166)	197 (40-166)	-	J (all detects)	
C711107*1*LC/08*1*LC (18609-701 B711182*1*MB)	4-Nitrophenol	-	-	37 (≤30)	J	A
	Pentachlorophenol	-	-	38 (≤30)	J	
	Pyrene	-	-	66 (≤30)	J	

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

Internal standard data were not provided for Phenanthrene-d10, Chrysene-d12, and Perylene-d12 for samples 18609-701, 18609-701MS, and 18609-701MSD and therefore were not reviewed.

All internal standard areas and retention times for 1,4-Dichlorobenzene-d4, Naphthalene-d8, and Acenaphthene-d10 for samples 18609-701, 18609-701MS, and 18609-701MSD were within QC limits.

All internal standard areas and retention times for all other samples were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

XIV. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No semivolatiles were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/Kg)		RPD
	18609-704	18609-705	
Di-n-butylphthalate	210	210	0

XVII. Field Blanks

Sample 18609-708 was identified as a rinsate. No semivolatile contaminants were found in this blank.

**Indicates sample underwent NFESC Level D review

Introduction

This data review covers 17 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270-SIM for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

The samples were analyzed after the DFTPP tuning. The instrument performance check could not be verified at the 12 hour interval.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

Average relative response factors (RRF) for all semivolatile target compounds and system monitoring compounds were greater than or equal to 0.05 as required.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% for all calibration check compounds and less than or equal to 50.0% for all other compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were

within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
97209LCS/D (18609-690 18609-688 18609-692 18609-693 18609-696 18609-702 18609-700** 97209MB)	N-Nitroso-di-n-propylamine Pentachlorophenol	- -	136 (27-135) 187 (38-146)	- -	J (all detects) J	A

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

Internal standard data were not provided and therefore not reviewed.

XI. Target Compound Identifications

The raw data was not provided for sample 18609-700* and therefore not reviewed.

Raw data were not evaluated for the samples reviewed by Level C criteria.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

XIV. System Performance

The system performance was within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed

by Level C criteria.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No semivolatiles were detected in any of the samples.

XVII. Field Blanks

No field blanks were identified in this SDG.

Introduction

This data review covers 12 soil samples and one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8081 for Chlorinated Pesticides and PCBs.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (February 1994) as there are no current guidelines for the method stated above.

A table summarizing all data qualification flags is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XIV.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
 - J Indicates an estimated value.
 - R Quality control indicates the data is not usable.
 - N Presumptive evidence of presence of the constituent.
 - UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
 - A Indicates the finding is based upon technical validation criteria.
 - P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Performance evaluation mixture data were not provided for sample 18609-708 and therefore not reviewed.

III. Initial Calibration

Initial calibration of single and multicomponent compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

Retention time windows were not provided and therefore not reviewed.

IV. Continuing Calibration

Continuing calibration at the beginning of the batch including sample 18609-700* was not provided and therefore not reviewed. Continuing calibration was performed at required frequencies for all other samples.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits with the following exceptions:

Date	Standard	Column	Compound	%D	Associated Samples	Flag	A or P
10/27/97	CCV OCP 25ppb	DB-608	alpha-BHC	20	18609-688 18609-692 97198MB	J	P
10/28/97 (00:38)	CCV OCP 25ppb	DB-608	alpha-BHC	16	18609-690 18609-693 18609-696 18609-702 18609-698 18609-704 18609-705	J	P

Date	Standard	Column	Compound	%D	Associated Samples	Flag	A or P

Retention time windows were not provided and therefore not reviewed.

The individual 4,4'-DDT and Endrin breakdowns were less than or equal to 20.0% .

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide or PCB contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Florisil cleanup was not required and therefore not performed in this SDG.

b. GPC Calibration

GPC cleanup was not required and therefore not performed in this SDG.

XI. Target Compound Identification

Retention time windows were not provided and therefore not reviewed.

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which an NFESC Level D review was performed with the following exceptions:

Sample	Compound	Reported Concentration	Recalculated Concentration	Flag	A or P
18609-700**	4,4'-DDE	2.2 ug/Kg	4.6 ug/Kg	J	P

Raw data were not evaluated for the samples reviewed by Level C criteria.

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

XIV. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No chlorinated pesticides or PCBs were detected in any of the samples.

XV. Field Blanks

Sample 18609-708 was identified as a rinsate. No chlorinated pesticide or PCB contaminants were found in this blank.

**Indicates sample underwent NFESC Level D review

Introduction

This data review covers 12 soil samples and 3 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010 and 7000 for Metals and EPA SW 846 Method 9010A for Cyanide. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, and Zinc.

The review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994) as there are no current guidelines for the methods stated above.

A table summarizing all data qualification flags is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from specified protocols or is of technical advisory nature.

Blanks are summarized in Section III.

Field duplicates are summarized in Section XIII.

Samples indicated by a double asterisk on the front cover underwent a NFESC Level D review. A NFESC Level C review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Level C criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
All samples in SDG G9710422	Cyanide	Calibration verification not performed at the required frequencies.	Calibration verification should be performed immediately following initial calibration and once every ten samples.	None	P

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found above the reporting limit in the initial, continuing and preparation blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
18609-702MS/MSD (All samples in SDG G9710422)	Selenium	14 (73-122)	23 (73-122)	51 (≤ 25)	J (all detects) R (all non-detects)	A
	Antimony	24 (80-120)	26 (80-120)	-	J (all detects) R (all non-detects)	
18609-702MS/MSD (All samples in SDG G9710422)	Mercury	76 (77-120)	-	-	J	A
	Arsenic	-	-	28 (≤ 15)	J	
	Aluminum	195 (80-120)	140 (80-120)	-	J (all detects)	
	Iron	212 (80-120)	157 (80-120)	-	J (all detects)	
	Magnesium	131 (80-120)	-	-	J (all detects)	

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Internal Standards

ICP-MS was not utilized in this SDG.

IX. Furnace Atomic Absorption QC

All graphite furnace atomic absorption QC were within validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for samples reviewed by Level C criteria.

X. ICP Serial Dilution

Although ICP serial dilution analysis was not required by the method, it was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

All sample result verifications met validation criteria for samples on which a NFESC Level D review was performed. Raw data were not evaluated for the samples reviewed by Level C criteria.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

XIII. Field Duplicates

Samples 18609-704 and 18609-705 were identified as field duplicates. No metals or cyanide were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	18609-704	18609-705	
Aluminum	7000	8100	15
Arsenic	3.1	3.1	0
Barium	110	110	0
Beryllium	0.56	0.58	4
Calcium	4900	6600	30
Chromium	8.4	9.8	15
Cobalt	6.0	6.3	5
Copper	8.3	8.1	2
Iron	11000	12000	9
Lead	3.2	3.4	6
Magnesium	4800	5200	8
Manganese	210	210	0
Nickel	11	14	24
Potassium	2300	2400	4
Sodium	290	310	7
Vanadium	28	29	4
Zinc	33	37	11

XIV. Field Blanks

Sample 18609-708 was identified as a rinsate. No metal or cyanide contaminants were found in this blank with the following exceptions:

Rinsate ID	Analyte	Concentration (ug/L)
18609-708	Barium Cadmium Calcium Copper Iron Magnesium Manganese Sodium Zinc	1.3 2.3 330 5 35 100 1.2 930 19
